

What it will cost to move—and keep the platform running.

A plain-language estimate for migration, hosting, storage, Zoom recordings, AI usage, and ongoing technical care.

✓ Prepared 04 Sep 2026

RECOMMENDED CLIENT BUDGET

\$2,233.39 estimated first 12 months

Approximately ₦2,968,175 at the indicative planning rate.

One-time migration

\$1,200

Platform / month

\$36.12

Sep + Oct tokens

\$600

This is a planning quote, not a final invoice. Taxes, foreign-exchange movement, exceptional feature work, and any additional paid vendor seats are excluded.

🔗 THE SIMPLE ANSWER

Start on Railway Pro.

Pro is the correct production tier even before traffic is high. It gives the client a team-ready production account; actual compute use is still metered.

Important: “High traffic” is not another Railway plan. It is the point where measurements show that a second app replica or more resources are needed.

CLIENT QUOTE

What the monthly fee covers

USD · based on supplied two-month averages

COST LINE	WHAT IT MEANS	MONTHLY / PERIOD	12 MONTHS
 September + October AI/token usage	Two exceptional iteration months only. Ongoing maintenance/retainer is excluded from this proposal.	\$300	\$600
 Railway production hosting	Pro account minimum for the web service and managed PostgreSQL.	\$20	\$240
 Cloudflare R2 video storage	Average first-year storage cost for 36 recorded hours added each month.	\$1.96	\$23.47
 Zoom Pro licence allowance	One annual-billed licence; remove this line if the client already has a suitable paid Zoom account.	\$14.16	\$169.92
12-month infrastructure subtotal		\$36.12	\$433.39

 The \$1,200 one-time migration allowance covers the ten-day move, environment setup, database migration, storage cutover, callback updates, verification, and rollback preparation. The existing maintenance retainer is intentionally excluded. AI/token usage is included only for September and October.

DECISION MATRIX

When Pro is enough—and when to scale

User counts are guides only. The actual decision should use Railway's CPU, memory, response-time, and egress measurements.

OPTION 1

Production baseline

Railway portion

\$20 / month

Recommended now

Use when: One production web service, one database, and video delivered directly from R2.

Decision trigger: Stay here while CPU is below 70%, memory below 75%, and peak LMS concurrency is roughly below 50.

Estimated first year: \$2,233.39

OPTION 2

Growth configuration

Railway portion

\$56.50 / month

Move when measured

Use when: Two web replicas are needed for reliability or busy class periods; database and egress usage are higher.

Decision trigger: Move here after sustained CPU above 70%, memory above 75%, repeated slow requests, or 50+ concurrent LMS users.

Estimated first year: \$2,671.39

OPTION 3

Video through Railway

Railway portion

\$20 + video egress

Avoid

Use when: Recordings are proxied through the app instead of delivered directly from R2.

Decision trigger: At 25 complete views per lesson, video adds about 540 GB/month and roughly \$27/month in Railway egress.

Estimated first year: \$2,557.39

ZOOM + STORAGE MODEL

36 recorded hours each month

18

2 hrs

21.6 GB

259 GB

Planning assumption: Zoom MP4 averages 0.6 GB per recorded hour. Actual files vary with layout, resolution, screen sharing, and participant video. At 0.4–1.0 GB/hour, month-12 storage would be roughly 173–432 GB.

R2 first-year storage estimate: about \$23.47 total. Storage is not the expensive part; safe transfer and video delivery are the important architecture decisions.

RECOMMENDATION

Import, verify, then clear Zoom

- 01 Zoom records the lesson in the cloud and sends the completion webhook.
- 02 The app streams the MP4 into private R2 storage using a retry-safe multipart upload.
- 03 The app verifies file size/checksum and confirms protected playback.
- 04 Delete the Zoom copy after seven days. This keeps Zoom's included 10 GB from becoming a storage bill.

The current importer holds the whole recording in web-server memory. A two-hour file can exceed a 1 GB service. Streamed/multipart transfer must be included in the migration—not deferred.

What changes the quote

- AI use materially above the current \$300/month allowance.
- More Zoom host licences, webinars, large-meeting add-ons, or long Zoom retention.
- New feature development outside routine maintenance.
- A second Railway replica, materially larger database, or sustained high compute use.
- Taxes and the USD/NGN rate at invoice date.

Assumptions and commercial notes

- USD figures use current public prices checked on 4 Sep 2026.
- The existing build/maintenance retainer is excluded from this proposal.
- One Zoom Pro licence is included at the annual-billed public rate; remove it if already owned.
- Quote excludes VAT/withholding, domain renewal, paid email overages, and major new product scope.
- NGN figures use an indicative ₦1,329/\$ planning rate.
- AI/token usage includes \$300 for September and \$300 for October only; later usage is billed only if incurred.
- R2 calculation assumes recordings are retained for the full year and 10 GB/month free storage.
